

SHADWOOD: engineered wood for door frame production

Designed for our customers who fabricate their own timber door frames, Shadwood provides a cost-effective solution for sourcing ready-made factory finished timber door linings. Not only does Shadwood cost less than traditional solid hardwood timber, it also saves money on fixing costs and cuts down on management time taken up by the procurement of consistently high quality hardwood.

Key benefits that Shadwood enjoys over traditional hardwood:

- More economic.
- Ultra dry and therefore very stable.
- Consistent colour – similar colours and grains can be controlled.
- Consistent features – sap, knots, splits and defects can be controlled.
- Compliant with J5 specification (BS EN 942:2007)
- Non-rated and FD30 frames are quicker to fix – no pre-drilling for pilot holes required.
- Relatively lightweight.
- FD30 certified.
- FD60 certified.
- FSC certified under Shadbolt COC.
- Can be matched up with corresponding door leaves
- All-timber construction - can be easily worked with conventional tools.
- Guaranteed for 10 years.
